

Digital Forum - 7th August 2024

Presented by:

Shai Mistry
Jo Boswell

Today's Agenda

- EMIS-X
- Ardens useful search folders and new patient alerts resources
- AOB

EMIS-X

- How to set up your EMIS-X account
- Accessing the EMIS-X application
- EMIS-X Clinical Views
 - Problems
 - Documents
 - Investigations
 - Medication
 - Consultations
- Patient banner
- Instant Messaging in EMIS-X
- EMIS-X newsfeed and single sign on to EMIS Now

Useful Search Folders and New Patient Alerts

- QOF Analyser
- Blood Test Due Analyser
- Useful Search Folders

Ardens QOF Analyser

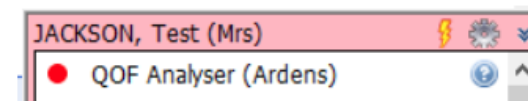

The Ardens QOF Analyser is a resource that supports GP practices with identifying outstanding QOF work for individual patients quickly and easily. It is located in the pink "alert" box. It can be used either alongside, or instead of, the existing QOF alerts.

The alert will summarise outstanding indicators for patients within the Clinical (long term conditions) and Public Health (smoking, BP, smears) domains, including any patient exceptions. Due to complexity, similar to EMIS, it does not include Vaccinations and Immunisations.

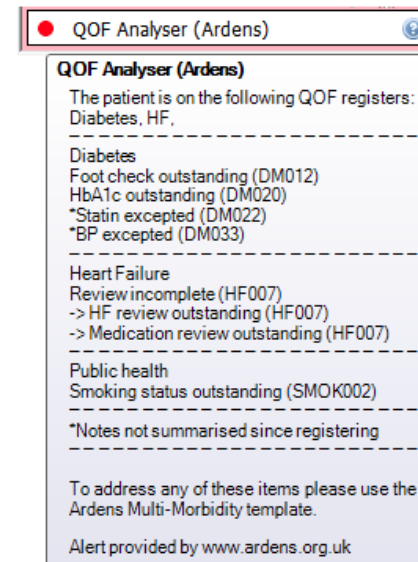

The alert is broken down by areas, with the outstanding indicators listed at the top and excepted indicators at the bottom of each area.

For indicators that require multiple elements to complete (e.g. HF007), each will be displayed in the alert as a single item to clearly outline the requirements.

Additionally, you will be notified if the patient notes have not been summarised, potentially leading to missing coded QOF data that could affect practice payments and patient care.

Hovering over the alert will display a summary.

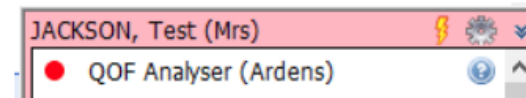

Ardens Blood Test Due Analyser

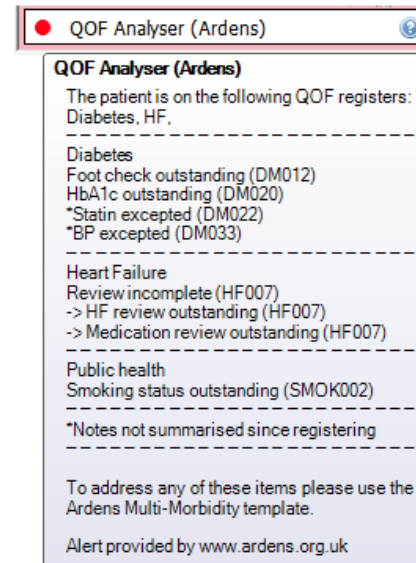

The Ardens Blood Test Due Analyser alerts practice staff to any blood tests due for the patient. This is based on any long-term conditions they are diagnosed with, prescribed medication, and recorded diary entries.

Please note - The Blood Test Due Analyser only alerts for bloods due in 'steady-state' drug monitoring. It will not flag for monitoring requirements related to drugs recently started or where doses are being titrated as these often have different monitoring frequencies.

When accessing a patient record, practice staff will be alerted to any blood test due today and blood test diary entries due within a month or overdue. The alert will display in the pink QOF box.

Hovering over the alert will display a summary.

Ardens Blood Test Due Analyser

The blood tests due are broken down into three categories:

1. Medication monitoring bloods due or overdue - include blood tests relating to prescribed repeat medications. It will only flag for bloods due in 'steady-state' drug monitoring.
2. Long-term conditions blood due or overdue - includes blood tests relating to the patient's long term-conditions.
3. Diary recall bloods due within 1 month or overdue - includes all Ardens Diary Recall System blood tests.

Ardens recognise that GP practices may wish to decide themselves which blood tests are actually required and this is the reason we have created these categories. For example if you are not using the Ardens Diary Recall System that you may ask your staff to ignore category (3) above.

1.20 Ad Hoc Reviews - Diary Recall (Ardens v15.6)

1.31 Administration - Registration (Ardens v25.5)

- 1.20 Ad Hoc Reviews - Diary Recall (Ardens v15.6)
 - Ardens Diary System Searches
 - *Ardens Diary Entries - All
 - *Ardens Diary Entries - All Except Annual Reviews
 - *Ardens Diary Entries - All Except Chronic Disease
 - Ardens (Legacy) High Risk Drug Monitoring Searches
 - Ardens Contraception Diary Searches
 - Ardens Follow-Up Diary Searches
 - Ardens Investigation - Bloods Diary Searches
 - Ardens Investigation - Other Diary Searches
 - Ardens Medication Administration Diary Searches
 - Chronic Disease Annual Rev Diary Searches
 - Diary Recall Housekeeping Searches
 - Medication Review Diary Searches
